SECRET/SECURITY INFORMATION

	-2-
•	
	The forward observer is the CO, and he directs the fire. A battalion CO (or battery CO) has about five to 10 men with him for fire direction and communication, not for security.
•	
	Battalion and battery COs organize AT defenses by directing all fire against threatening tanks. No passive defenses, such as ditches, etc. are employed.
•	
	Aerial reconnaissance, scouting by artillery reconnaissance men, and interrogation of prisoners are used to survey a target area.
•	
	Artillery and mortar units, attached for support, are release to local control only after termination of a battle.
,	
	The gun commander is responsible for the service ability of his gun. If a gun does not fire correctly, or the mechanism does not function properly, it is in theory not supposed to be used, but in actual practice the gun will be fired in combat for as long as it can fire. guns were in good condition.
	At the end of the last war (1945) the Soviets developed delayed action fuzes, MD 7 and MD 8 /membrannoye deistviye7.
	shells with MD 7 or MD 8 fuzes bury themselves in the ground near the target, and explode later. They are used to fire on enemy pill boxes and machine gun nests. They are also used in fragmentation/high
	explosive projectiles.
	explosive projectiles.

	Α.	In a	typical Soviet attack the following guns are used:	
		(a)	57-mm AT guns for antitank firing; 76-mm and 100-mm for firing against personnel, tanks and pill boxes.	
		(b)	122-mm and 152-mm Howitzers, 80-mm and 120-mm mortars, M-13 Rocket Launchers for destroying fortifications and pill boxes.	
			All guns can be used as AT weapons.	
			12.7-mm AAMG, 37-mm and 85-mm AA guns are used against enemy planes	
13.				
8				50X1-HUM
14.				
	٦	and 1	SU's (100-mm SP, 122-mm SP L52-mm SP guns) are considered artillery and are under	
		art1]	lery control and regulations.	
15.				
		(a)	Subsequent concentration: all guns fire on the same target.	
		(p)	Standing barrage: artillery preparatory fire before the attack which does not displace.	
		(c)	Infantry accompanying barrage: guns either displace or transfer their fire.	
		(d)	Anti-tank barrage: stationary AT fire.	
		(e)	Rolling AT barrage: fire on tanks from guns which displace.	_
16.				
		truct	point and area concentration fire are employed. Des- ion fire with indirect artillery fire is conducted by ag according to map coordinates and by correcting the fire.

50X1-HUM

19.

The deputy for artillery is subordinate to the CO and advises the CO in the proper use of artillery. While theoretically the combined arms commander or unit CO has the final say, the over-all CO will always be guided by the artillery deputy.

20.

Towed artillery in tank and mechanized formations has the function of mobile artillery to support these units in combined infantry/tank artillery attacks.

21.

- A 76-mm or 100-mm gun will be in position and open fire within four to five minutes.
- A 57-mm AT gun can be in position and ready to fire within one to two minutes.
- A 122-mm Howitzer will be in position and ready to fire within seven minutes.

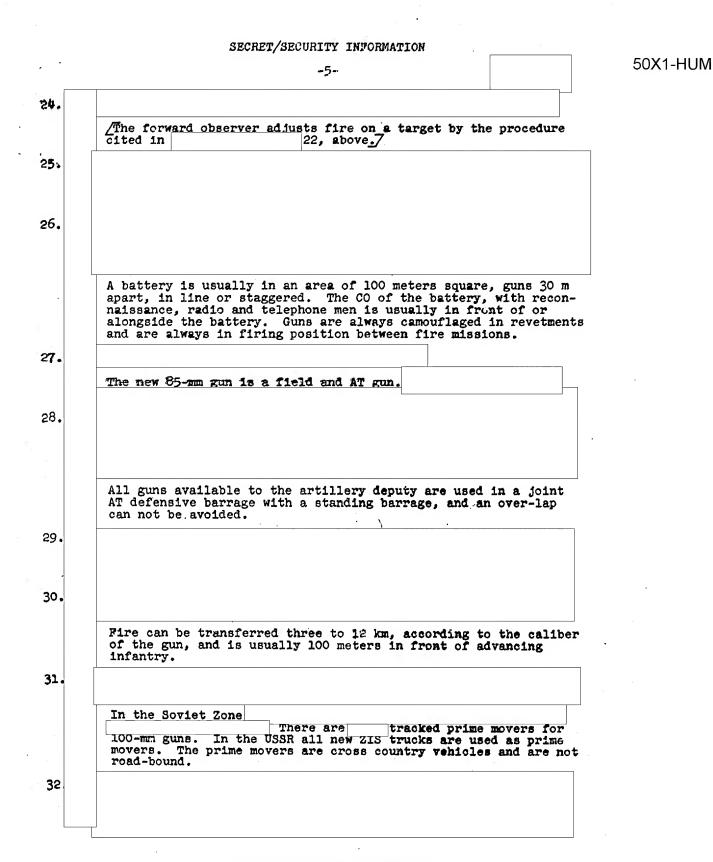

The battery CO supervises the firing, and either the platoon leader or NCO gun commander directs the actual firing.

55.

After a target has been determined, it is zeroed in by registry. The battery CO acts as forward observer and directs the fire by giving vertical and horizontal corrections by phone or radio. Then, reference points and/or grid coordinates and the exact elevation and azimuth are entered into the log of the gun by a recorder. The gunner /navodchik/ makes the actual corrections. The CO, acting as forward observer, has a compass, an azimuth scale, binoculars, a battery commander's scope, a radio and a phone for fire direction.

23.

Most concentrations are preplanned, based on aerial reconnaissance or on reports of reconnaissance men. If a surprise target appears, the unit CO, on receiving orders from a higher CO will immediately transfer his fire by direct aiming, without prior registry, to the target of opportunity. This transfer can be accomplished in one to two minutes.

The main consideration in the selection of time is the secrecy of the move. Moves are usually at night and without lights. Gun positions are reconnoitered by division and regimental COs with their staffs, who then assign the positions to battalion CO, who, in turn, assign battery firing points. The crews, arriving with the guns prepare the gun positions, with particular emphasis on camouflage, ease of resupply of ammunition, terrain features, and visibility.
